- Importing \*.GPX from the SD card
- Export \*.GPX
- Routing
- Estimated travel time
- Wind information (direction speed)

**Git:** <https://github.com/Maxislav/bike-atlas-android>

## EnCon

# Android application Google Play

 Very simple application for memorizing words. Just add the unfamiliar words and their translations and memorize when you have a free time. You can hide and show translations with a single touch. To fix the result, you need ten times correctly to make the word of mixed letters.

**Git:**

<https://github.com/Maxislav/Englishcon>

## AnyControl

### Android application Google Play

Приложение рассчитано на множество устройств и неограниченное количество команд. Любое управляемое с помощью SMS команд может быть внесено в память приложения. Для начала вы создаете объект который будете контролировать, и на странице всех команд добавляете связанные с объектом команды. На главной странице находятся избранные команды, которые вы можете отправить. На странице всех команд может храниться полный список команд которые вы не используете но могут пригодиться. Для того чтобы команды были доступны для отправки вам нужно отметить их как избранные. Так же присутствует история отправленных команд. Если команда была доставлена ее дата отмечается зеленым цветом.
